

Industrie 4.0 and Digital Transformation – where OT meets IT

Dr. Dieter Wegener, Siemens, Chairman of ZVEI Industry 4.0 Council

29 September 2020

Overview

1

Digitalization of Economy

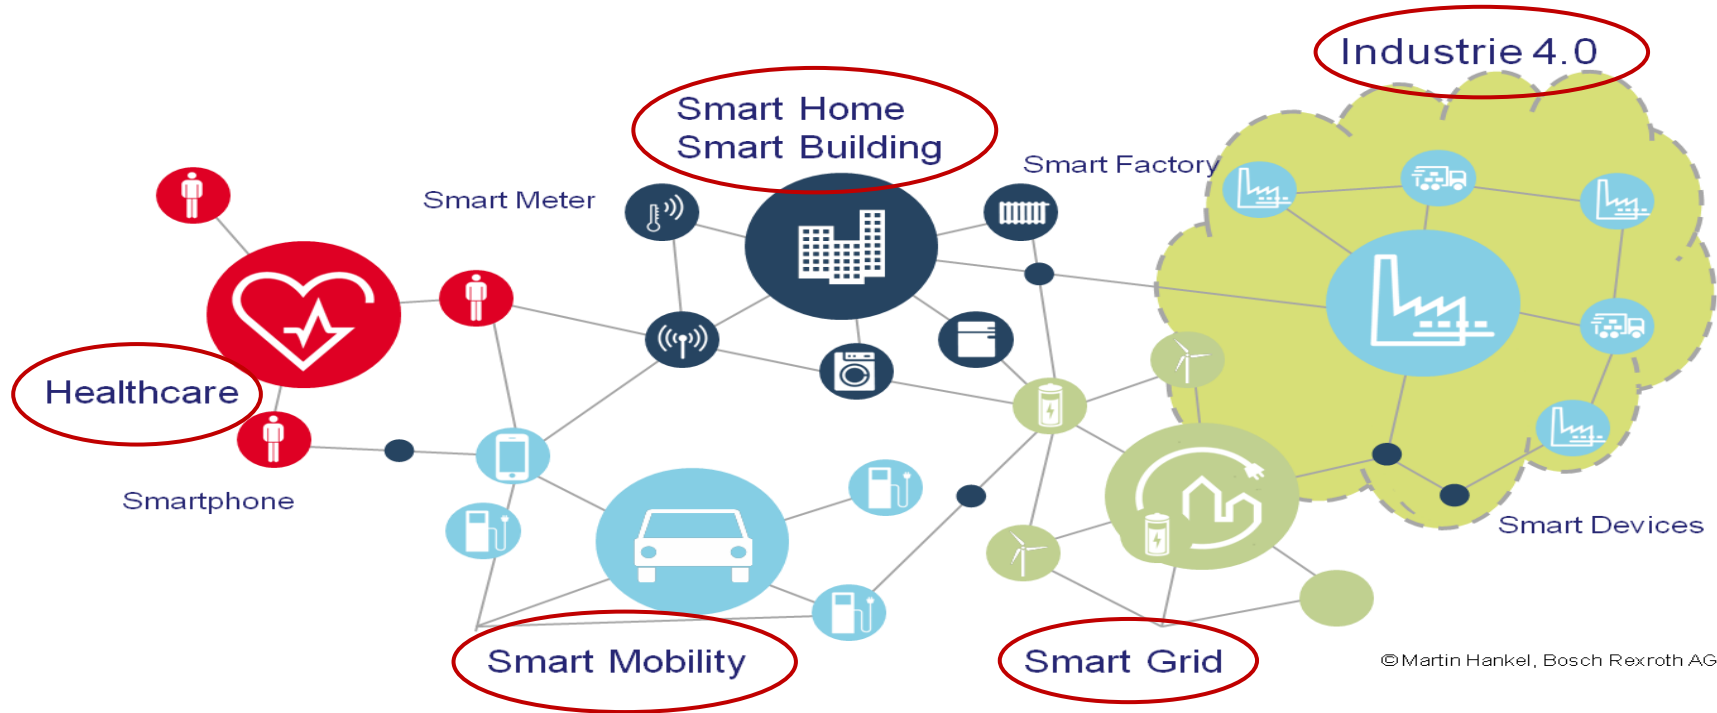

2

Digital Nameplate to enable „Industrie 4.0“

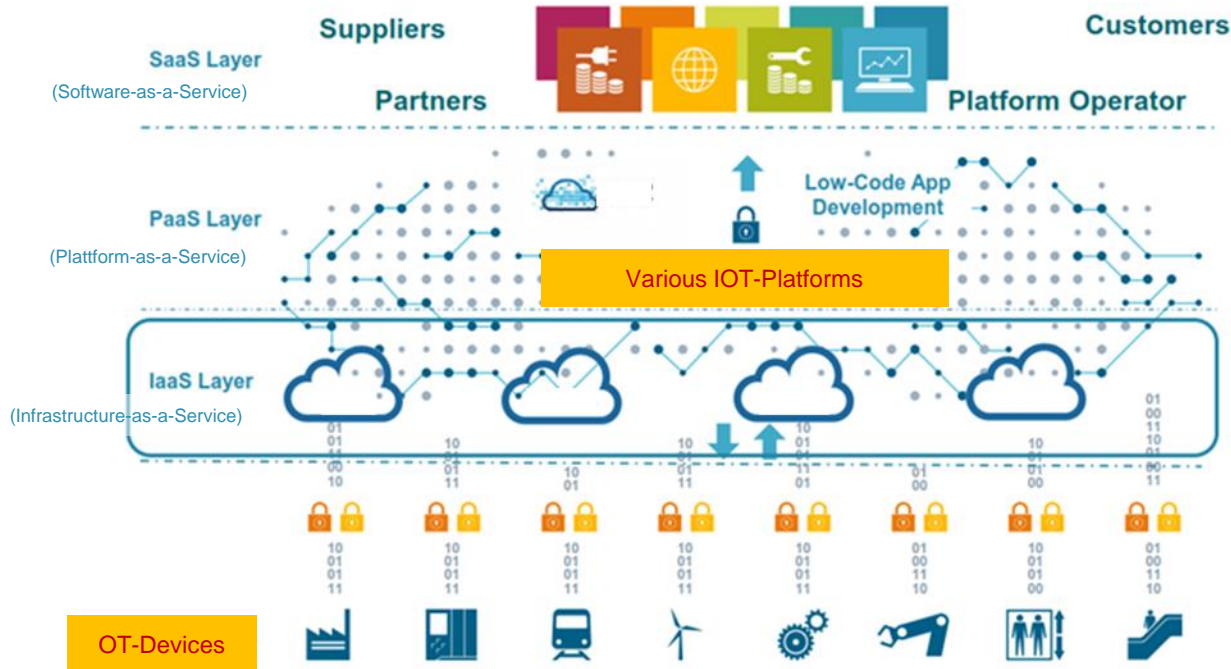

3

„Industrie 4.0“ Use Cases CCM

„Digitalization of Economy“ is leading to a „Connected World“

„Digital Economy“ based on „IoT-Platforms“ for B2C and B2B

„Digital Value Add“

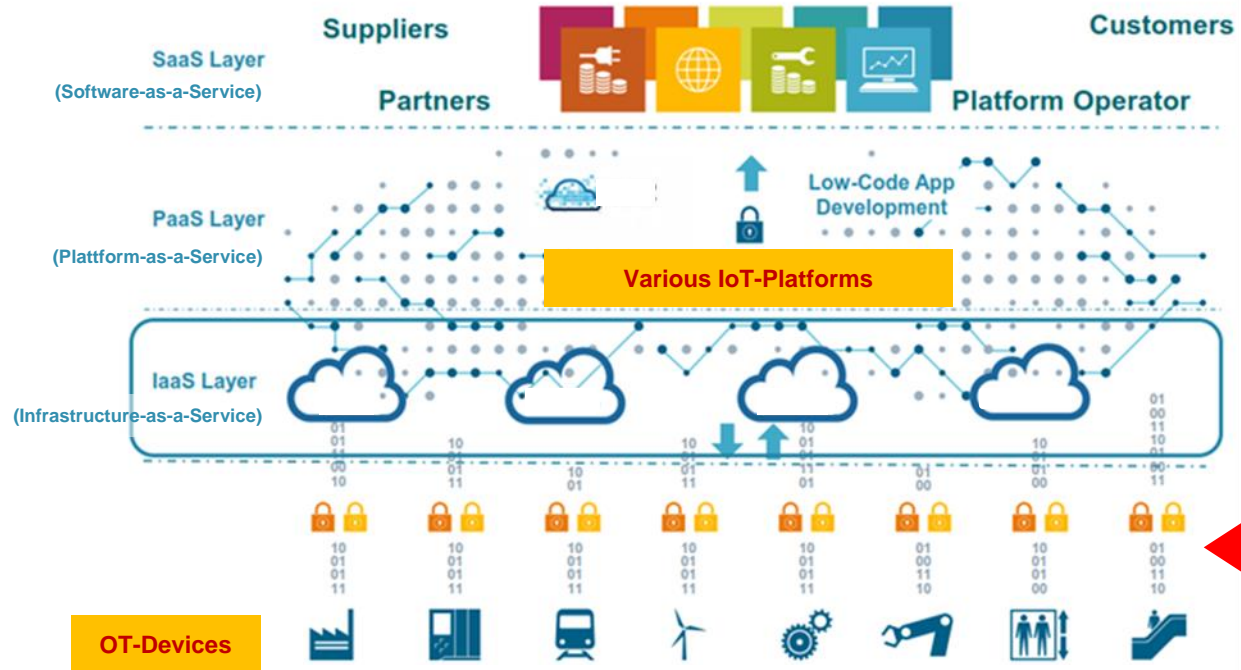

means

„Big Data“ out of OT-Devices

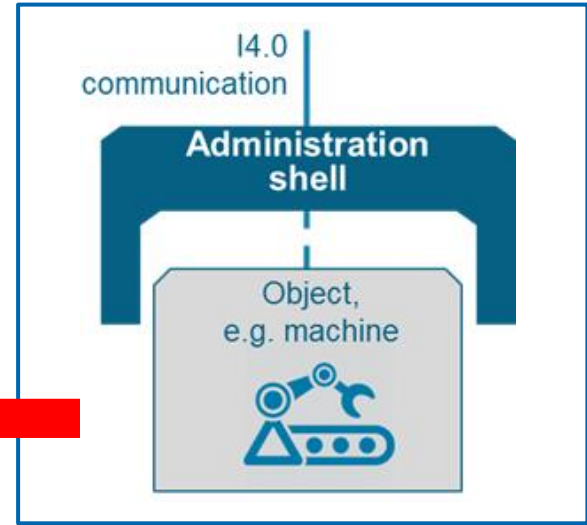

will be analysed with „Apps“ (Algorithms) at SaaS-Layer to „Smart Data“

and distributed via INTERNET as „Smart Services“ to the customers

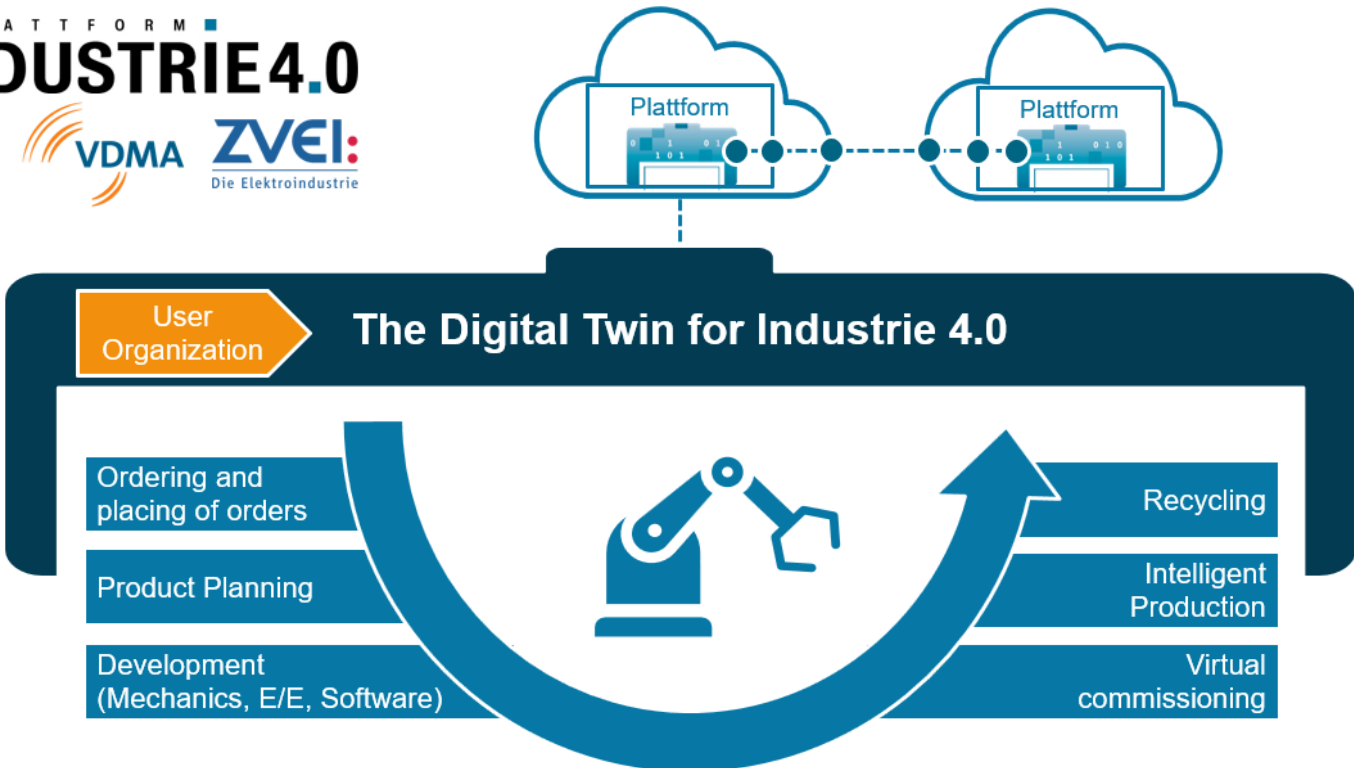

Cross-company Interoperability for OT-Devices enabled by Concept of „I4.0-Component with AAS“

I4.0-Component with AAS (Asset Administration Shell)

Industrial Digital Twin Association The User Organization for Industrie 4.0

Overview

1

Digitalization of Economy

2

Digital Nameplate to enable „Industrie 4.0“

3

„Industrie 4.0“ Use Cases @ CCM

The Digital Nameplate 4.0

consistent.sustainable.future-proved.connected

Saving time and costs

- Access to product documentation online
- No costs for paper and logistics

One valid standard

- Across companies
- via DIN SPEC 91406

Global Access

- Documents in all languages
- Locale Certificates (CE, CCC, ...)

Sustainability

- Saving resources
- No paper documentation anymore

Overview

1

Digitalization of Economy

2

Digital Nameplate to enable „Industrie 4.0“

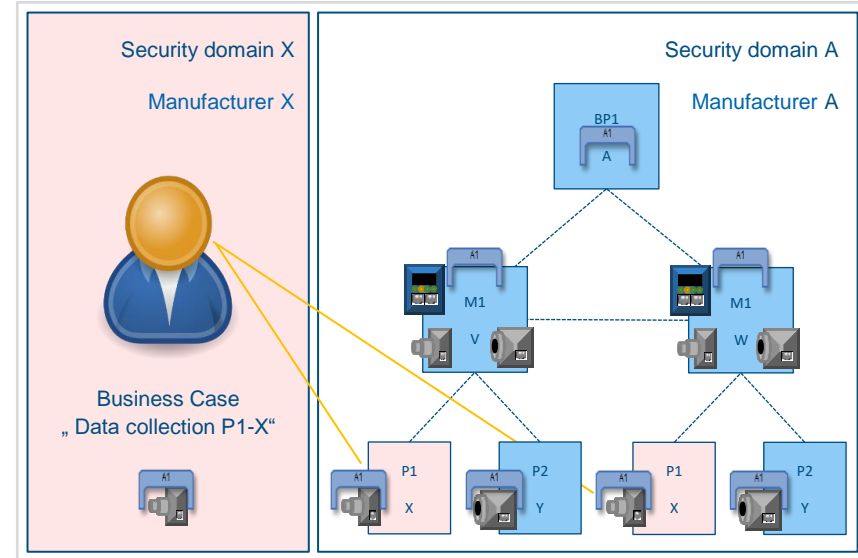

3

Use Case: CCM with GAIA-X

Condition Monitoring

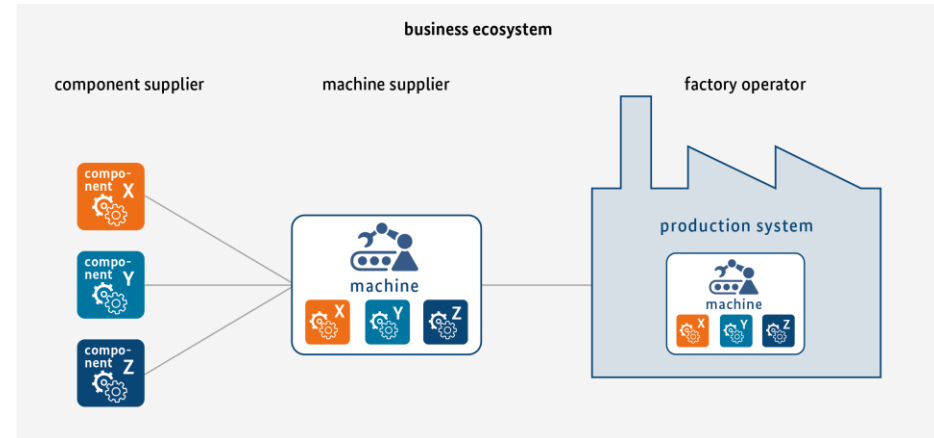

Use Case „Collaborative Condition Monitoring“ (CCM)

- The Use Case "Collaborative Condition Monitoring" (short: CCM) deals with the collection and use of operational data to optimize the reliability and lifetime of machines and their components during operation.
- In the real world, installed machines come from different machine tool manufacturers, equipped with different products from different manufacturers
 - Challenge for manufacturer X to access the data of his delivered product X
- CCM supplements the classic version with the aspect of multilateral cooperation
 - Share data across companies and competitors
 - Classification of data, including non-brand- and product-differentiating data

Collaborative Condition Monitoring 3-fractal

- As an exemplary, simplified process of an operational ecosystem, a three-stage value chain with different actors is considered
- The smallest possible fractal of a multilateral structure is a tripartite structure, shown here as (1) component supplier, (2) machine supplier, and (3) factory operator
- **Hypothesis:**
 - With CCM, an economic advantage can be gained within the digital ecosystem ("digital business model") by increasing the reliability and lifetime of components and machines.
 - Collaboration of all participants in the value chain.
 - Access to data depending on permissions

Collaborative Condition Monitoring Perceptibility in other industries

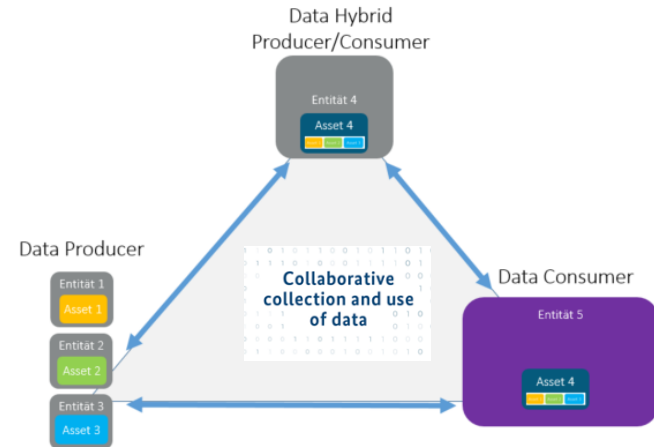

Example: Production (physical assets)

- The smallest possible fractal of a multilateral structure is a tripartite structure, shown here as component supplier, machine supplier and factory operator

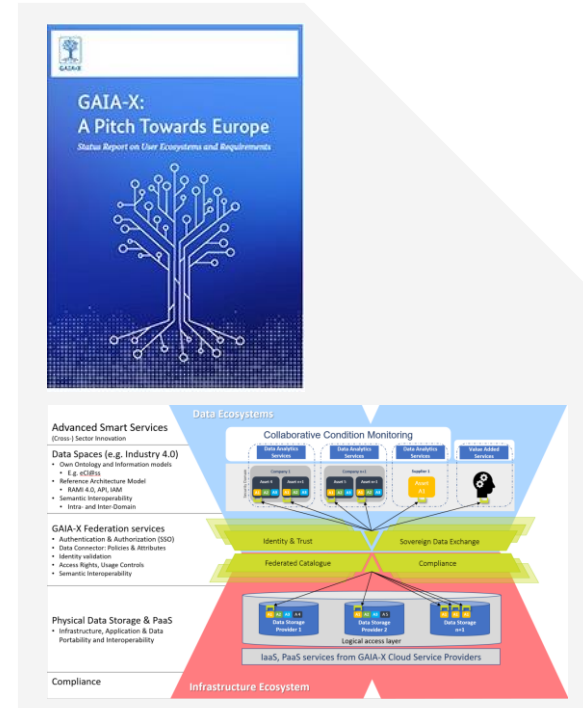

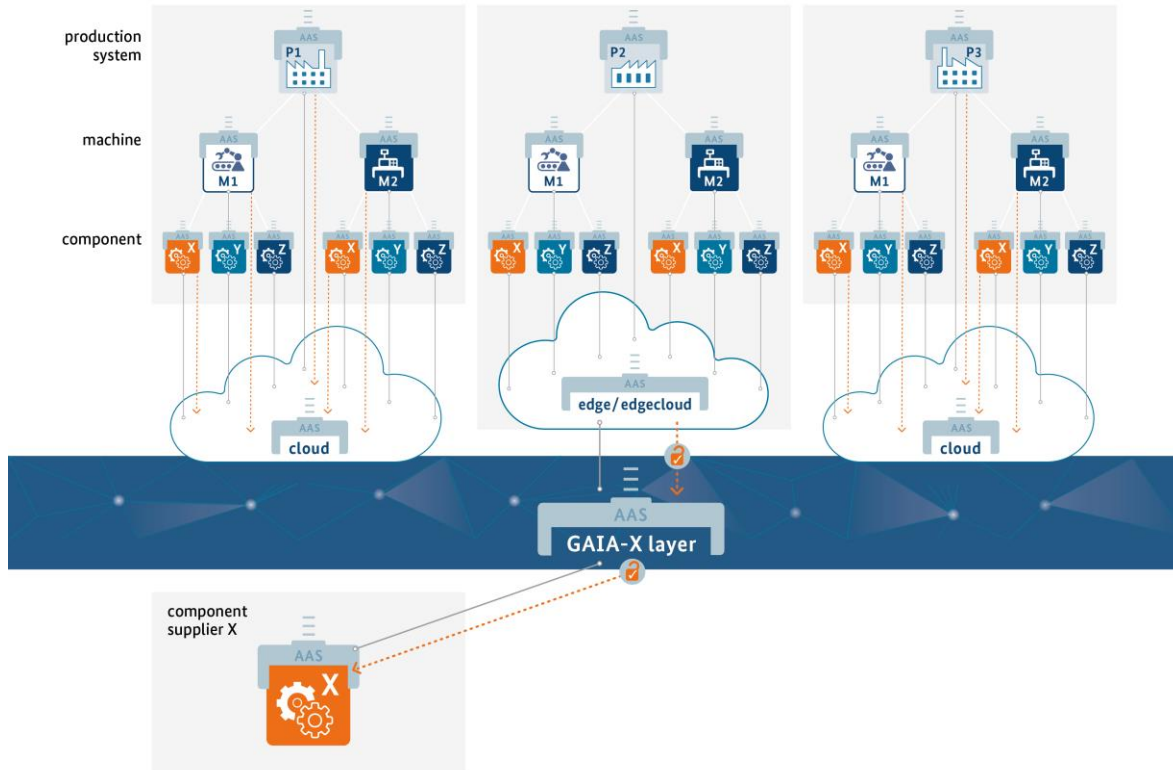

Example: Virtual Assets

- The smallest possible fractal of a multilateral structure is a tripartite structure, shown here as Data Producer, Data Hybrid (Producer/Consumer), and Data Consumer

Collaborative Condition Monitoring Solution module - neutral platform (e.g. GAIA-X)
